That is, when the apparatus is much used, we can afford to buy expensive equipment in order to get low cost of operation, but where little used, cheap apparatus of comparatively low efficiency is the best. 88. Valuance.--If we take the reciprocal of the vestance per hour (V_h), we get by equation (65) $1 \text{ TRN.}, V = V_r \text{ CR} + \text{TaN}(66)$ We shall call (U) the valuance. It is a measure of the worth of the unit. When ($2V$), the number of hours of use, is zero, the valuance is zero, i.e., the unit is worthless (useless). The valuance increases as (N) increases, becoming a maximum when $N = 8760$, i.e., the apparatus is worth most (most useful) when it is used continually. 89. We shall now determine the vestances...
